

## WATTmatic 100 battery charger from GYS, for an automatic option

These bright 6/12V batter chargers will go down well with anyone looking for a yellow colour scheme in their garage! They also tackle all gel or liquid lead-acid batteries and let technicians charge without having to disconnect batteries.

The systems are designed to protect delicate on-board vehicle electronics from polarity reversals or battery tension errors. There are two charging speeds and indicators to show what stage of the charging process the unit has reached. The WATTMATIC 100 is one of a range of chargers that help maintain optimum charge levels without the danger of over-charging and damaging batteries.
