

GYS 2012 Welding Catalogue Launch – New MIG Range

GYS are pleased to announce the launch of their 2012 welding catalogue. Reflecting the continuing expansion of GYS, this is their largest catalogue to date and introduces 10 new welding machines.

Since GYS re-entered the UK in 2009, their growth has been based around advanced Flexible Voltage (FV) and Power Factor Correction (PFC) technology and with the recent addition of the FV 'Pearl' MIG Inverter they now offer advanced 110V machines for MMA, TIG DC, TIG AC/DC & MIG/MAG.

The emphasis in the 2012 catalogue is very much on MIG/MAG with 5 new machines addressing three market sectors. Neomig 270 is a 3 – phase MIG pulse inverter due later this year. Magys 350 and 450, are fully synergic industrial specification welders, available in compact or separates configuration. And in single phase the successful SMARTmig range launched in 2011 has been expanded with the introduction of SMARTmig 180 and SMARTmig 182 two full size 180A models sporting the innovative 'SMART' control panel.

The TIG range has also expanded with the launch of GYS's first 3 Phase TIG welder the TIG 250 DC/HF is a 250A machine featuring an advanced control panel and pulse mode. The new TIG 168 DC/HF is a single phase 160A TIG machine also with advanced control panel and pulse mode. Finally new to the 2012 catalogue is the Gysmi 200P, a 200A MMA single phase low cost welding machine.

All of the new machines are manufactured by GYS in their factory in Laval, France.
