

50th anniversary with new inverters

Fig. 5

GYS, the French manufacturer of welding machines and battery chargers, is celebrating its 50th anniversary. To coincide with the Practical World fair in Cologne/Germany, GYS is launching several new products including three new inverter MIG welders, the "Pearl" range. The "Pearl 150" offers a high level of welding performance from a compact and light weight machine. The "190" (Fig. 5) range offers advanced functionality, with fully synergic control, and includes the capability for MIG brazing. The "190" is available in super compact format, or as the larger XL version which can accommodate a 15 kg wire reel. The "Pearl" range is suitable for a wide range of applications. Throughout its anniversary year GYS has on offer through its dealers a wide range of "ready to weld" kits at special 'anniversary' prices. These kits come with everything the welder needs to get started. Customers can choose from a wide range of models for MMA, MIG/MAG and TIG. Last but not least, to mark the 50 years since the creation of the company in 1964, GYS has published a limited edition book. It takes the reader on a journey from how it all started and through an eventful half cen-

tury of company history. Most of all the book provides an entertaining, colourful and fascinating insight into the modern manufacturing facility and R&D centre that GYS has become today. (SAS GYS, ZI, 134 Bd des Loges - BP 4159, 53941 Saint-Berthevin/France; www.gys.fr)
