Jump pack life boosted

French welding equipment and battery charger manufacturer GYS, has introduced a pair of battery boosters. The newcomers, referred to as 610 and 810 respectively, feature an integrated 'Hawker' battery as well as a special built-in charger. The charger is micro-processor controlled and the makers say that it will prolong the life of the unit dramatically. Both units can be permanently connected to the mains. The 610 has a peak output of 2,050A, while the larger 810 peaks at 3,100A.
